

# AWS Batch Vs Lambda

- Fully managed batch processing at ant scale
- Efficiently run 100,000s of computing batch jobs on AWS
- A batch job is a job with a start and an end (Opposed to Continuous)
- Batch will dynamically launch EC2 instance or Spot Instances
- AWS batch provisions the right amount of Compute/memory
- You submit or schedule batch jobs and AWS batch does the rest!
- Batch jobs are defined as Docker Images and run on ECS
- Helpful for cost optimizations and focusing less on the infrastructure

## Batch vs Lambda

- Lambda:

- Time limit
- Limited runtimes
- Limited temporary disk space
- Serverless

- Batch:

- No time limit
- Any runtime as long as it's packaged as a Docker image
- Rely on EBS / instance store for disk space
- Relies on EC2 (can be managed by AWS)
